Add New Tag

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Description

The description is not prominent by default; however, some themes may show it.

Default post settings

☒ Attempt to notify any blogs linked to from the post

☒ Allow link notifications from other blogs (pingbacks and trackbacks) on new posts

☒ Allow people to submit comments on new posts

(These settings may be overridden for individual posts.)

Other comment settings

☒ Comment author must fill out name and email

☐ Users must be registered and logged in to comment

☐ Automatically close comments on posts older than 

14

 days

☒ Show comments cookies opt-in checkbox, allowing comment author cookies to be set

☒ Enable threaded (nested) comments 

5 ▾

 levels deep

☐ Break comments into pages with 

50

 top level comments per page and the 

last ▾

 page displayed by default

Comments should be displayed with the 

older ▾

 comments at the top of each page

Email me whenever

☒ Anyone posts a comment

☒ A comment is held for moderation

Before a comment appears

☐ Comment must be manually approved

☒ Comment author must have a previously approved comment

Comment Moderation

Hold a comment in the queue if it contains 

2

 or more links. (A common characteristic of comment spam is a large number of hyperlinks.)

When a comment contains any of these words in its content, name, URL, email, or IP address, it will be held in the [moderation queue](#). One word or IP address per line. It will match inside words, so "press" will match "WordPress".

#### Comment Blacklist

When a comment contains any of these words in its content, name, URL, email, or IP address, it will be put in the trash. One word or IP address per line. It will match inside words, so "press" will match "WordPress".

#### Avatars

An avatar is an image that follows you from weblog to weblog appearing beside your name when you comment on avatar enabled sites. Here you can enable the display of avatars for people who comment on your site.

##### Avatar Display

☒ Show Avatars

##### Maximum Rating

☒ G — Suitable for all audiences

- ☐ PG — Possibly offensive, usually for audiences 13 and above
- ☐ R — Intended for adult audiences above 17
- ☐ X — Even more mature than above

#### Default Avatar

For users without a custom avatar of their own, you can either display a generic logo or a generated one based on their email address.

☒  Mystery Person

☐ Blank

☐  Gravatar Logo

☐  Identicon (Generated)

☐  Wavatar (Generated)

☐  MonsterID (Generated)

☐  Retro (Generated)

#### WARNING:

Changing your permalinks settings can seriously impact your search engine visibility. It should almost *never* be done on a live website. [Learn about why permalinks are important for SEO.](#)

WordPress offers you the ability to create a custom URL structure for your permalinks and archives. Custom URL structures can improve the aesthetics, usability, and forward-compatibility of your links. A [number of tags are available](#), and here are some examples to get you started.

#### Common Settings

- ☐ Plain `http://localhost/wp2/?p=123`
- ☒ Day and name `http://localhost/wp2/2019/12/11/sample-post/`
- ☐ Month and name `http://localhost/wp2/2019/12/sample-post/`
- ☐ Numeric `http://localhost/wp2/archives/123`
- ☐ Post name `http://localhost/wp2/sample-post/`
- ☐ Custom Structure `http://localhost/wp2/`

Available tags:

### Optional

If you like, you may enter custom structures for your category and tag URLs here. For example, using `topics` as your category base would make your category links like `http://localhost/wp2/topics/uncategorized/`. If you leave these blank the defaults will be used.

Category base

Tag base
